Partner's Personal cabinet (PC) is the main workspace for our partners to deal with information about payments and withdrawal of funds from the system. Users can view payment statistics and statuses, generate financial reports, conduct reconciliations, place links to pages that customers will be redirected to after paying for goods or services, view available payment methods, track the balance of funds, withdraw funds to the necessary bank accounts, etc.

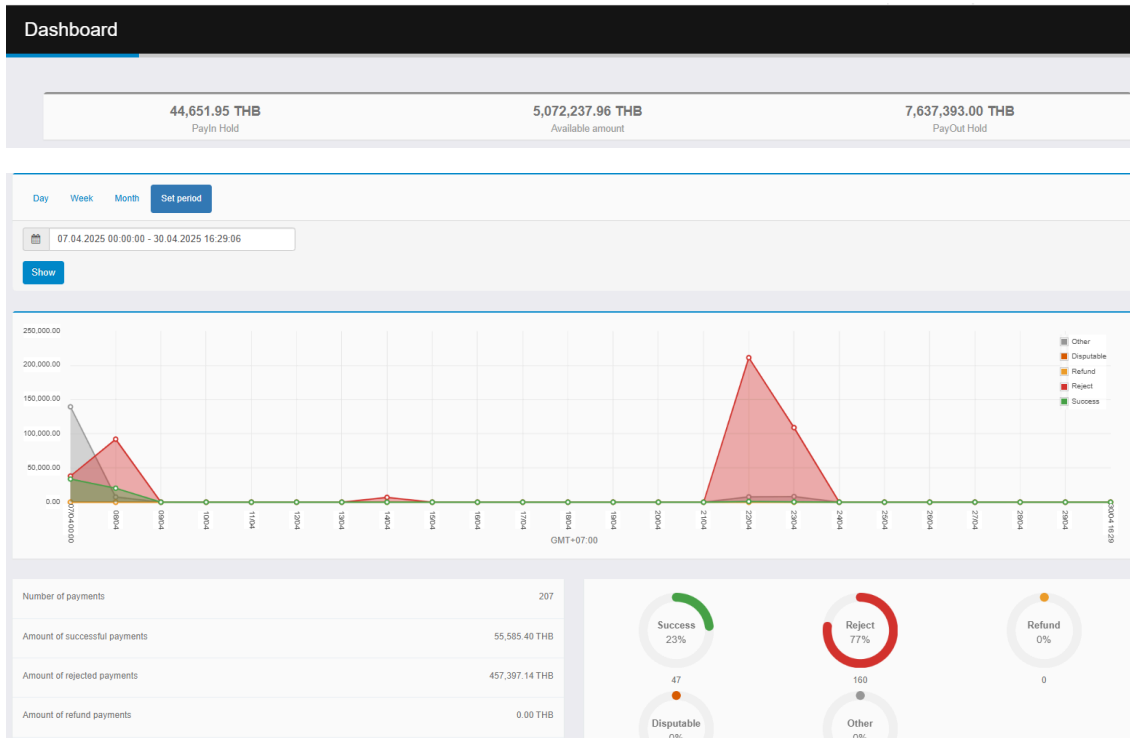

Currently, PC functionality is actively developing. Our company gladly accepts requests for new functionality from our partners.

The PC sections available to the user are displayed on the left side of the screen:

1 Dashboard Section

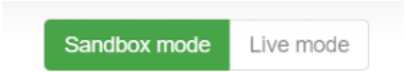

The Dashboard section is the first page that the user sees after authorization.

The Dashboard section displays the balance of funds and the overall statistics on partner payments that have passed through the system. You can set the period for which the report will be generated on the top panel: per Day, Week or Month. Also you can set a different time interval on the Set period tab.

2 Operating modes of PC

PC works in two modes: **Sandbox mode** (the test environment of the payment system) and **Live mode** (the production environment). Mode selection is indicated by a switch in the right side of the top panel. The selected mode is highlighted in green.

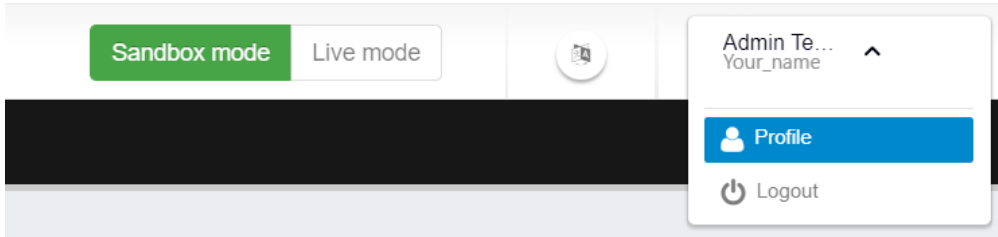

Sandbox mode Live mode

NB

When integration is completed, our partner is switched to Live mode (the production environment). Sandbox mode is turned to unavailable in order to avoid problems while working in Live mode. If necessary, our company can activate Sandbox mode after receiving such a request from our partner to the support service.

3 Profile

Current user's profile is available in the drop down menu in the right corner of the top panel.

You can set up a secret key for **two-factor authentication (2FA)** in the Profile. 2FA provides more reliable protection of operations in your PC.

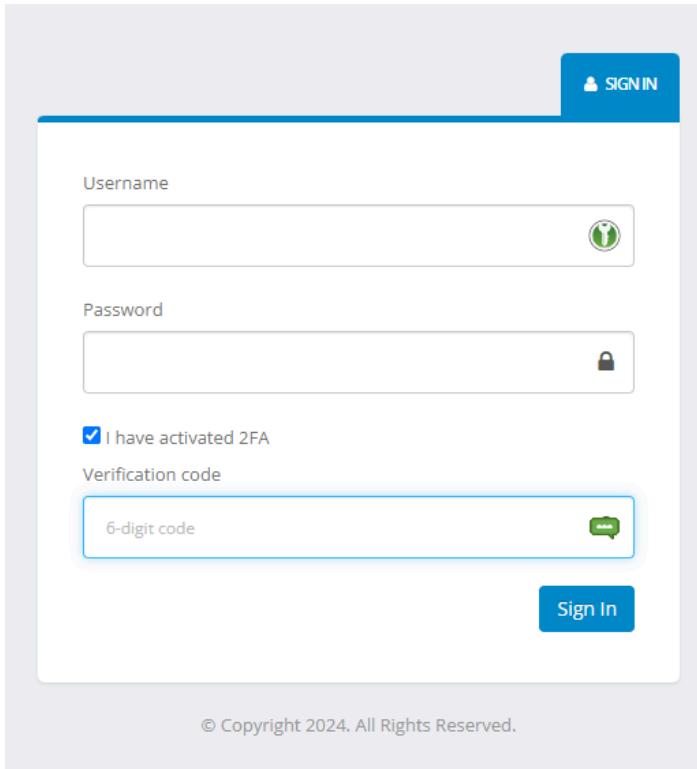

A screenshot of the 'Profile' settings page. The page has a dark header with the word 'Profile' and a home icon. Below the header, there is a form with several input fields: 'Name' (with placeholder 'Your name'), 'Username' (with placeholder 'Your username'), 'Company' (with placeholder 'Your company name'), 'Password', and 'Repeat'. Below these fields, there is a section for '2FA settings' with a green button labeled 'Enable 2FA'. At the bottom of the form, there is a blue button labeled 'Save'.

QR-code and text key are generated by clicking the green button **[Enable 2FA]**.

A screenshot of the 2FA setup page. The page has a dark header with the word '2FA' and a home icon. Below the header, there is a section for '2FA settings' with a green button labeled 'Enable 2FA'. Below this, there is a QR code. Below the QR code, there is a text input field for the validation code. Below the input field, there is a green button labeled 'Verify code'.

Both entities can be added to any authentication application (for example, Google Authenticator) by directly entering a text key or by scanning a QR code. After this, the generation of six-digit one-time passwords will begin. The current password should be entered in the "Enter your validation code" field. To confirm the 2FA binding, you need to click the *[Verify code]* button, then click the *[Save]* button.

After this, two-factor authentication (2FA) will be activated. During subsequent authorizations, the system will request a new generated one-time confirmation password, which should be entered in the "Verification code" field.

The image shows a login interface. At the top right is a blue button with a user icon and the text "SIGN IN". Below this is a white form box. Inside the form box, there are three input fields: "Username" with a green circular icon to its right, "Password" with a lock icon to its right, and "Verification code" with a green speech bubble icon to its right. The "Verification code" field has a placeholder text "6-digit code". Below the "Verification code" field is a checkbox labeled "I have activated 2FA" which is checked. At the bottom right of the form box is a blue button labeled "Sign In". Below the form box, centered, is the text "© Copyright 2024. All Rights Reserved."

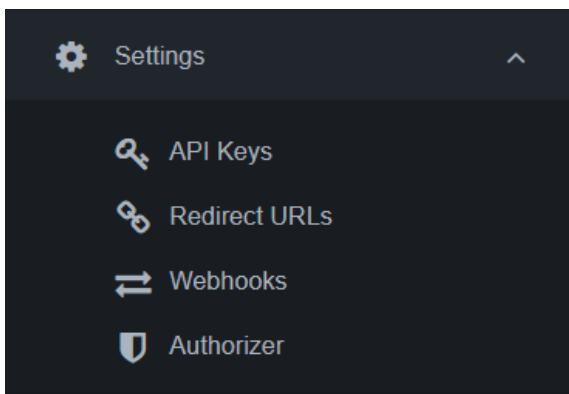

NB

If you lose access to your 2FA account in the application and are unable to log into your personal account, please contact the technical support service with a corresponding request.

If 2FA is activated, the user does not lose access to the client's account if they do not log in to their personal account for more than 90 days.

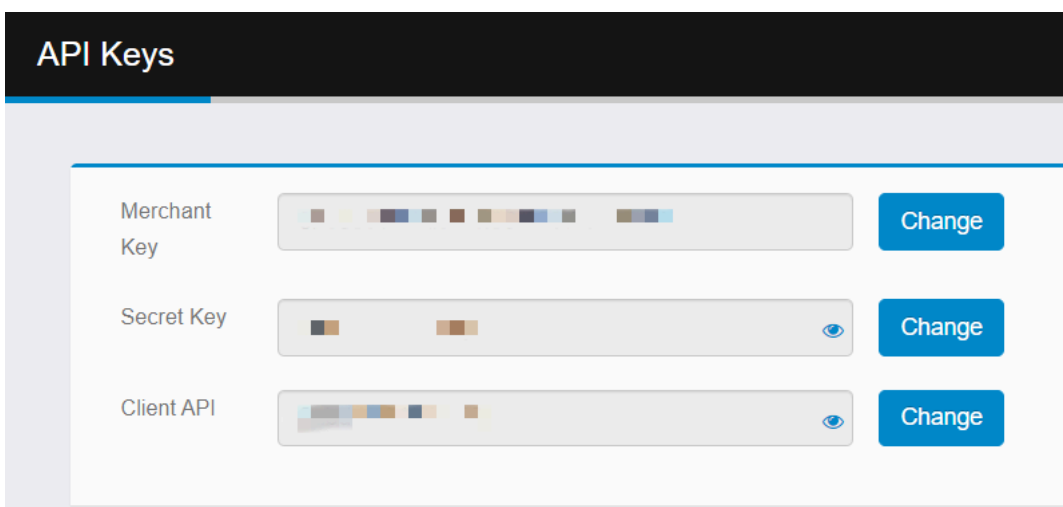

4 Settings section

Settings section is available only to users with Merchant Admin rights. This section sets all the necessary parameters for interaction between the partner's Endpoint and the payment system. The Settings section consists of four subsections: **API keys**, **Redirect URLs**, **Webhooks** and **Authorizer**.

4.1 API keys

You need to generate the secret keys required to work with the system in the first API keys subsection. There are **3 types of keys**:

Merchant Key is publicly available. It is required to identify the Partner in the system. When the Partner registers in the system, Merchant Key is generated automatically. Used in Merchant API, Light API.

Secret Key is private. It is used to encrypt requests while contacting with the system. This key must be generated before starting work with the system. Once the key is generated, save it in a safe place. The Secret Key can be viewed at any time by clicking on the "eye" symbol - Reveal the 'Secret key', and then entering the password for your account. Used in the Merchant API.

⚠️ The Partner can recreate Merchant Key and Secret Key using the "Change" buttons. In order to maintain the proper interaction between the Partner's selling platform and the payment system, the partner needs to replace the old keys with new ones on his side in the Endpoint program code.

Client API is a secret key required to authorize requests from the partner's working systems to the payment system through the Client API. Save the Client API key in a safe place. The Client API key can be viewed at any time by clicking on the "eye" symbol - Reveal the 'Secret key', and then entering the password for your account.

⚠ When the Partner changes this identifier using the "Change" button, the partner needs to replace the old value with a new one in existing working systems where the call to the Client API methods is implemented.

⚠ **Attention!** ⚠ If a partner has changed a pre-existing key using the [Change] button, then it is impossible to return the previous key value, since this data is not stored in our system. Please, be careful when using the [Change] button ⚠

4.2 Redirect URLs

The second subsection **Redirect URLs** contains links to pages from the partner's side, to which the client is redirected depending on the result of the payment:

- to the **Success URL**, if payment was successfully confirmed
- to the **Reject URL**, if payment was refused
- to the **Waiting URL** when waiting for a response from the payment system.

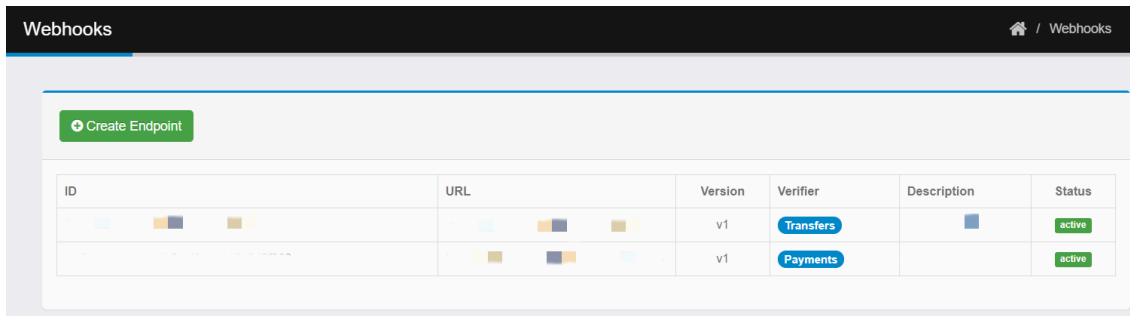

The screenshot shows a web form titled "Redirect URLs". It contains three text input fields, each with a label to its left: "Success URL", "Reject URL", and "Waiting URL". Each input field contains the text "https://api." followed by a row of ten small, multi-colored squares. Below these fields, on the left side, is a blue button with the word "Save" in white text.

The partner may not indicate Redirect URLs if he has dynamic, i.e. different URLs for each payment. In this case, the partner indicates the actual Redirect links every time a new payment is created. If you leave the fields in the Redirect URLs section empty, the redirect will, by default, be performed to the Redirect URLs of the payment system.

4.3 Webhooks

The third subsection is **Webhooks**, which lists Endpoint URLs. **Endpoint** is a link to a web application on the partner's side. Our payment system sends requests to Endpoint and notifies the partner about various events in the system related to this partner.

If the list of Endpoints is empty, the partner will not receive notifications from the payment system, while payments and withdrawals will be processed in a regular mode.

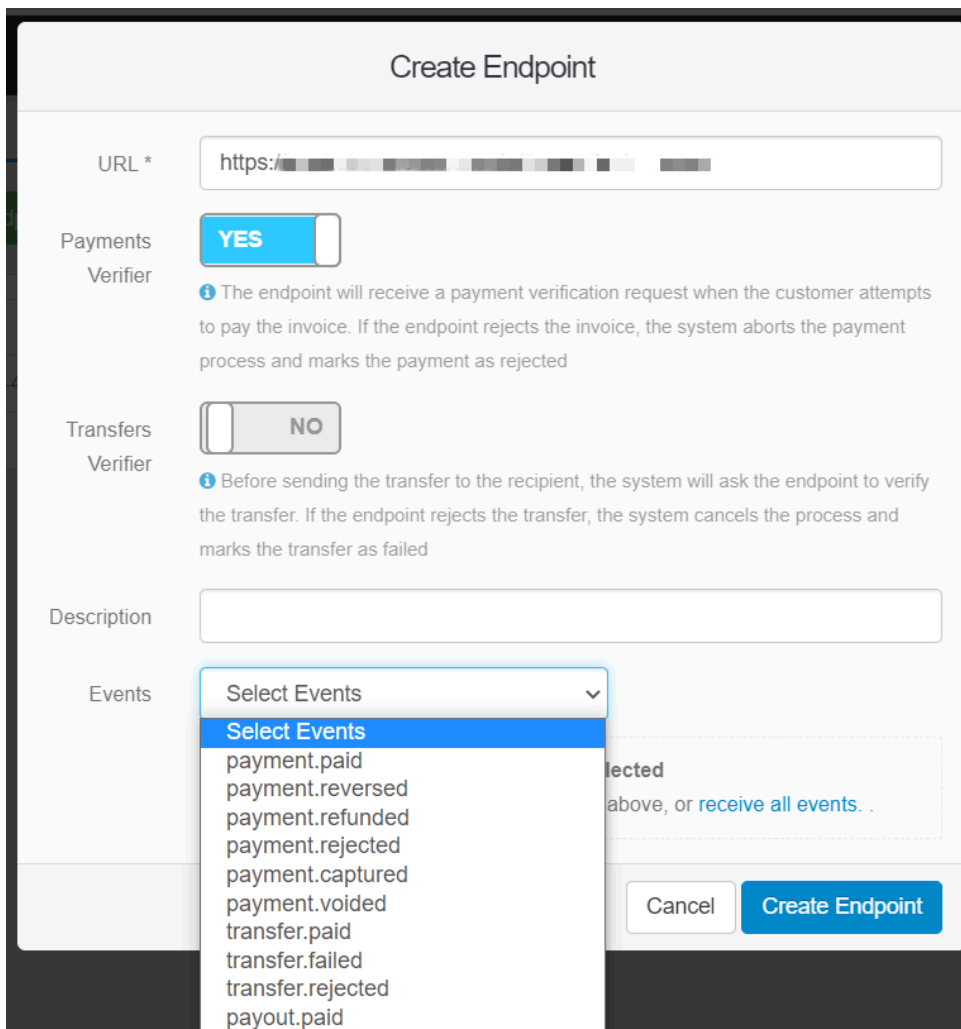

The screenshot shows the 'Webhooks' section of a partner's personal cabinet. At the top, there is a 'Create Endpoint' button. Below it is a table with the following columns: ID, URL, Version, Verifier, Description, and Status. The table contains two rows of endpoints, both with version 'v1' and status 'active'.

ID	URL	Version	Verifier	Description	Status
		v1	Transfers		active
		v1	Payments		active

Partner can create new Endpoint by clicking on the **+Create Endpoint** button.

In the window that opens, you must specify the Endpoint URL, and, if necessary, enable one or both Payments Verifier and Transfers Verifier switches, thereby indicating to the system that before processing payments and / or transfers, you must send a verify request to the Endpoint URL. This request is needed to confirm the parameters of payments and / or transfers on the partner's side, i.e. for verification. If these switches are not enabled in any Endpoint, then the payment system will carry out processing without additional verification.

⚠ Attention! Payments Verifier or Transfers Verifier switches can be enabled (together or separately) only in one of the established Endpoints. At any time, you can enable verification in a new Endpoint, provided that it is disabled in the previous one.

The 'Create Endpoint' form contains the following fields and options:

- URL ***: A text input field with a placeholder URL.
- Payments Verifier**: A toggle switch set to 'YES'. Below it, a note states: 'The endpoint will receive a payment verification request when the customer attempts to pay the invoice. If the endpoint rejects the invoice, the system aborts the payment process and marks the payment as rejected'.
- Transfers Verifier**: A toggle switch set to 'NO'. Below it, a note states: 'Before sending the transfer to the recipient, the system will ask the endpoint to verify the transfer. If the endpoint rejects the transfer, the system cancels the process and marks the transfer as failed'.
- Description**: A text input field.
- Events**: A dropdown menu with the following options:
 - Select Events
 - payment.paid
 - payment.reversed
 - payment.refunded
 - payment.rejected
 - payment.captured
 - payment.voided
 - transfer.paid
 - transfer.failed
 - transfer.rejected
 - payout.paid

At the bottom right, there are 'Cancel' and 'Create Endpoint' buttons.

In the Description field, you can specify a text description for the created Endpoint.

The Events field contains a drop-down list of events about which notifications will be sent to this URL. The partner can select one or several events from the list. Selected events are displayed with gray stickers under the drop-down list line. Partners can delete them one by one by clicking on the cross, or delete all at once by clicking on the *Clear* button on the right.

After completing all the settings, be sure to click the [Create Endpoint] button to confirm the changes and create a new Endpoint.

Detailed information about each of the created Endpoints, including the version history, Signing secret key and Webhook detail, can be viewed and edited in the drop-down area by clicking on the Endpoint ID number.

Financial information from May 1, 2019 to January 31, 2020 [Download](#)

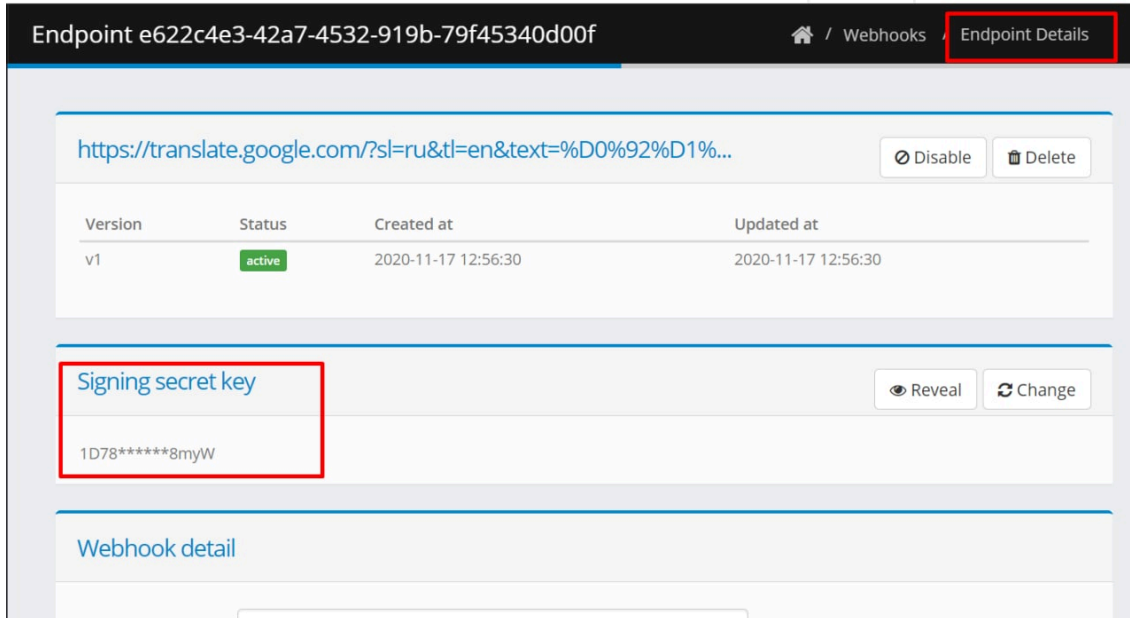

Date	Number of payments	Overall amount	Minimal payment	Maximal payment	Recipient amount	Fee amount
May 2019	3	60.10 THB	20.00 THB	20.10 THB		
Jun 2019	36	2,339.00 THB	1.00 THB	100.00 THB

Dec 2019	88	6,079.41 THB	28.00 THB	210.00 THB		
Jan 2020	18	906.57 THB	20.00 THB	145.00 THB		

Attention!

In Live mode the webhook will be automatically deactivated (disabled) after 7 unsuccessful attempts to notify the Endpoint (i.e. if all 7 requests in a row executed within 2 hours receive responses from the Endpoint with a status different from 200).

It will be possible to activate the webhook only manually from the corresponding Settings section in the PC.

Signing secret key is a key that is unique for each webhook and it is used to create a hash signature that is sent in response to our callback to the partner's Endpoint.

When creating a new Endpoint URL in the Webhooks section, the Signing secret key is generated automatically by our system. In the Webhook detail area, the Signing secret key is displayed disguised for security purposes. To get the Signing secret key in full form, you need to click on the Reveal button.

⚠️ Difference between the Secret key from the API keys section and the Signing secret key from the Webhooks section ⚠️

API keys are used to interact with the Merchant API, Light API, Client API, Transfer API, and the partner's Signing secret key is used in Callback API for sign responses to our callbacks for this particular webhook.

Thus, Secret key and Signing secret key are different keys and serve different purposes:

✅ For example, when the partner creates `initPayment` in our direction, he signs the request with a hash generated using the Secret Key (from API Keys). When our system in the same session sends him a QR code / payment link (which he will give to customer) in response, such a response is also signed with a hash generated using the partner's Secret Key (from API Keys).

✅ When the payment session for the order (invoice) starts, and provided that the partner has a webhook with "Payments Verifier" enabled, our system signs the callback with a hash created using the Signing secret key of this webhook, and expects a response from the partner with a hash created with this same Signing secret key.

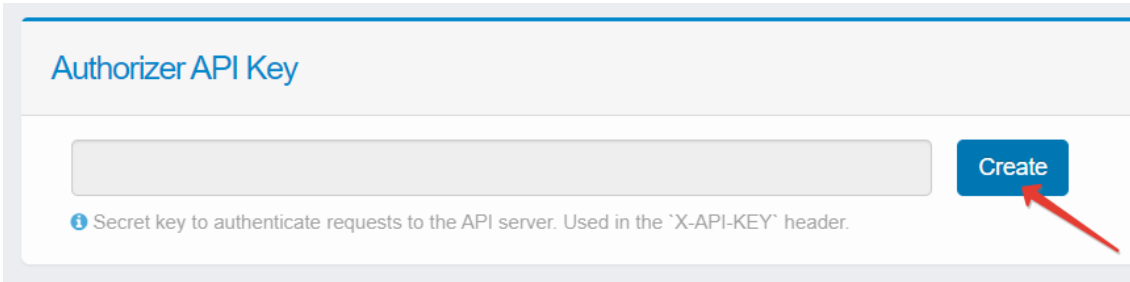

4.4 Authorizer

The fourth subsection **Authorizer** contains settings for providing automatic authorization of transfers carried out via the Authorizer API.

 **Authorizer subsection becomes available to the partner in the production environment (Live mode) only after the conclusion of an agreement on risks and successful testing in the Sandbox environment. In the Sandbox environment, the Authorizer subsection is available without restrictions.**

The first block of the subsection is the Authorizer API Key. This is the secret key required to authenticate requests to the API server.

The partner needs to generate the Authorizer API Key himself by clicking the *Create* button.

The second block contains the **Gateway settings: Authorizer Public Key and Allowed IP addresses**.

Authorizer Public Key is a public key from an RSA key pair, which must be in PKCS8 format. The system uses this key to verify the hash signature on all authorization requests.

Partner needs to generate the Authorizer Public Key by himself, in one of the following ways:

- 1) Through the console using the following commands:

```
ssh-keygen -P "" -t rsa -b 2048 -f authorizer-keys
```

Code Block 1 Create pair of RSA keys:

```
ssh-keygen -f authorizer-keys -e -m pkcs8
```

Code Block 2 Convert public key to PKCS8:

2) Using any RSA key online generator that supports a key size of 2048 Bit. For example, the online service <https://8gwifi.org/rsassignverifyfunctions.jsp> creates public key immediately in PKCS8 format.

After generation and conversion to PKCS8 format, the key must be inserted into the Authorizer Public Key field.

To save the changes made, click **Save**.

Allowed IP addresses is a list of (at least one) partner's IP addresses from which the payment system is waiting for authorization requests. If authorization requests are sent from other IP addresses, the system will respond with a 403 status and access will be denied.

The **Public key of API Server** is specified for partner in an open form and is used to confirm the data signature in responses from the authorizer API. The payment system, in turn, uses the public key from the partner's authorization service to verify the signature in the request.

Public key of API Server

```
MIIBIjANBgkqhkiG9w0BAQEFAAOCAQ8AMIIBCgKCAQEAhjLk2GxBL0Ui8byA264Fm0Xp9c+2nfnqovqcYuPHsR+VM3/IA0wi/0igSx1j/9GZ0gCXFUOAr  
aryzGwl7PME4Iz8yprZE5Nee8tNGnaGj5IHRm5dCSw4MV4a75fB4aq7EibDtauzTKDfn4f5jQ7jlb1wEWZmv4sZhWsl2RCWUwcDvCMI1Zi/XcUy2IOjWHb  
EGrRb6+yLyUaV/yMC++9JiqPhzrYauBE01wBIAbu+yipJ6PigREZYxRhOdysvg566M/pnJG5c7Y7Gvl3N91+P6apIVtatQlipo12ghthAw9XSiQO6FFvf9T5  
XkyBvR7IleLTVVfVUOnEh2ZymB4ZEQIDAQAB
```

 RSA public key of the API Server. Authorizer can use it to verify signature of API Server responses.

5 User groups

This section is intended for creating user groups (or roles of users) and managing a set of user's rights to information in the PC.

7 Payments Section

You can get details for each of the existing payments in the system in this section. At the top of the section there is a Payment statistics dashboard with the number and amount of processed payins, broken down by status, the default time 1 month.

Below is an area Search payments for filtering payments. You need to enter Payment ID (payment number in the system) or Order (payment number on the partner's side) to receive information on a specific payment.

You can filter the list of payments by specifying the appropriate search criteria: status, period, paysystem, etc.

Search payments

Identifier: Payment ID Status: success Status Date (GMT+07:00)

Order Paysystem (any)

[Find](#) [Reset](#)

You can open Payment information by clicking on *Payment ID*. Here you can see extensive payment details and revision history per each status in Changes history area. For more information about payment statuses, see the Merchant API documentation.

Payment information

Payment ID	960913

success	15.04.2024 14:31:23 +07:00	

About REJECT status

Payment ID	Order	Amount	Recipient Amount	Fee	Fee VAT	Payment system	Created	Status Date	Status
960825	... 2232333p21	2,622.00 THB	2,476.37 THB	136.10 THB	9.53 THB	Visa / MasterCard / JCB / UnionPay	04.04.2024 16:14:46 +07:00	05.04.2024 16:15:31 +07:00	rejected

The **Reject status** can be assigned to the payment in the following cases:

1. Our payment system or the bank's system refused processing for any reason. For example, if there is a suspicion that the payment card is stolen.
2. When a verification request to the partner's Endpoint URL was made and the payment system was rejected. For example, if a partner can no longer provide a service or product for a given order.
3. Upon expiration of the invoice lifetime (TTL, time-to-live) within the payment system. The TTL value depends on the payment service. When requesting to create a payment (initPayment), Partner can change the TTL parameter downward. In this case, TTL cannot be less or equal to zero. If Partner specifies TTL value greater than the maximum set, the payment system will forcefully set the TTL to the maximum value allowed by this payment service. Details are described in API documentation (see initPayment method).

If you need to make a refund to the buyer, you can issue the refund by clicking on the *Make a refund* button and indicate the reason for the refund.

Make a refund

Refund can be issued for various reasons: it is impossible to provide a service, the partner's website is temporarily out of service, problems with the delivery of goods, the goods are out of stock, etc.

Refund can only be issued for a payment in a successful status.

To create a refund, go to the **Payments** section and select the appropriate payment in the **success** status that you want to return to the client. Click on the **Payment ID number**.

Make a refund

Specify the reason why you are ordering a refund. For example: *"This item is currently unavailable for sale."* Click the **Refund** button to complete the application.

Make a refund

Reason*

This item is currently unavailable for sale.

Refund

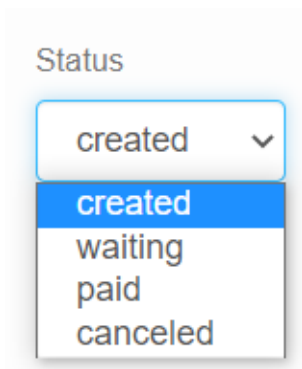

Cancel

Go to the **Refunds** section and you will see your completed refund applications. After registration, the refund has the **waiting** status - this means that this transaction is waiting for manual execution on our side.

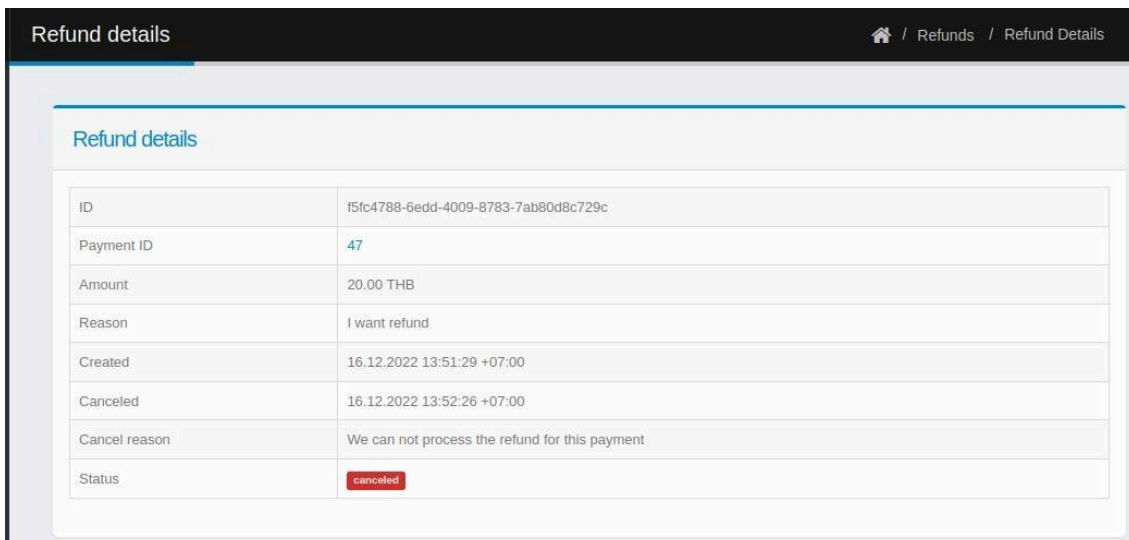

Refunds					20 per page ▾
Refund ID	Payment ID	Amount	Created at	Status	
b5b95bd5-7766-452e-8af4-ec166919031	11351	100.00 THB	15.12.2022 18:36:14 +07:00	waiting	
9c49d938-6bb2-4804-8835-468af427d7b9	11350	100.00 THB	14.12.2022 21:48:55 +07:00	canceled	

Refunds are usually processed within 24 hours.

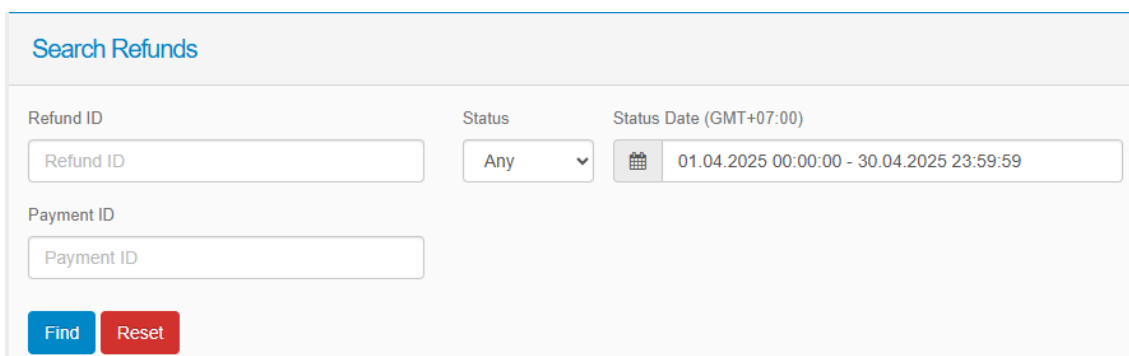

After successful execution on our side, the status of the transaction changes from waiting to **paid** and the money is credited back to the client's account.

In case of refusal to carry out the refund on our side, the status will change to **canceled**. The reason for rejecting the refund request will be indicated in the **Refund details** in the **Cancel reason** field. You can view Refund details by clicking on **Refund ID**.

You can select specific refunds from the general list using the filter by **Refund ID** or **Payment ID**, by transaction **Status** and group by **Status Date** (the time is indicated in the GMT+07:00 time zone). By default, the 20 most recent return requests are displayed; scrolling down the list loads previous requests.

9 Services Section

Services section displays all payin&payout payment methods available to the partner.

The list of methods and the size of commissions for them is determined by terms of the agreement between our company and the partner (Merchant Service Agreement).

Transfers fees							
Currency	Fee	Minimal fee	Available amount		Available daily volumes		
Thai Baht	2%	6.00 ฿	min: 10.00 ฿ max: 100,000.00 ฿		merchant: 2,000,000.00 ฿ recipient: 20,000,000.00 ฿		

Services and fees							
Name		Currency	Fee	Minimal fee	Available amount	Payments ttl	Payments Hold
	Bangkok Bank RPM Bill Payment Online	Thai Baht	7%	17.00 ฿	min: 1.00 ฿ max: 150,000.00 ฿	1 days	-
	SCB Easy Pay	Thai Baht	3%	7.00 ฿	min: 1.00 ฿ max: 15,000.00 ฿	1 days	-
	Visa / MasterCard / JCB / UnionPay Online	Thai Baht	15.00 ฿ + 5%	7.00 ฿	min: 15.00 ฿ max: 50,000,000.00 ฿	1 days	-
	ATM or Cashier Offline	Thai Baht	1%	1.00 ฿	min: 1.00 ฿ max: 15,000.00 ฿	5 minutes	-
	QR Code Payment Online	Thai Baht	3%	0.00 ฿	min: 10.00 ฿ max: 50,000,000.00 ฿	1 days	8 days

Fee is the amount of the commission in %, which depends on the amount of the transaction's amount, but at the same time the amount of the commission cannot be less than **Minimal fee**.

Available amount: min - minimum payin limit; max - maximum payin limit for 1 transaction.

Payments ttl - invoice lifetime.

Payments hold - duration of the hold period.

Available daily volumes - the size of the daily limit for withdrawals from the system via transfers

If you want to add a new payment method, you need to contact our Support service. After reviewing the application and making a positive decision, our company establishes an additional agreement to the main contract. After that the new payment method will be added in this Services section.

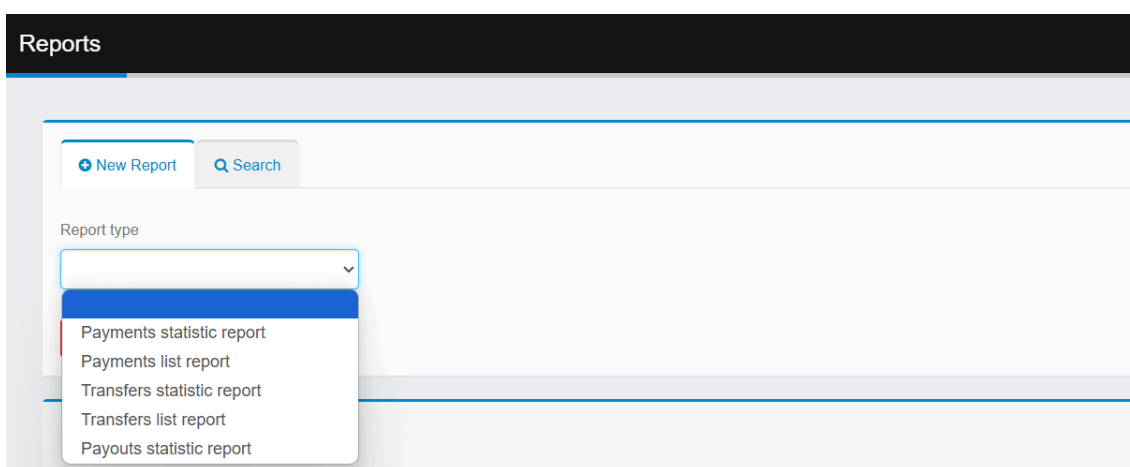

10 Reports Section

Section for generating different types of reports on payments, transfers and payouts.

On the New Report tab, the partner can generate the following types of reports for a certain period:

- Payment statistic report - report on the number and total amount of accepted payments.
- Payment list report - a report with a list of accepted payments, with details for each payment.
- Transfer statistical report - report on the number and total amount of processed transfers.
- Transfer list report - a report with a list of completed transfers, with details for each transfer.
- Payout statistic report - report on the number and total amount of processed payouts.

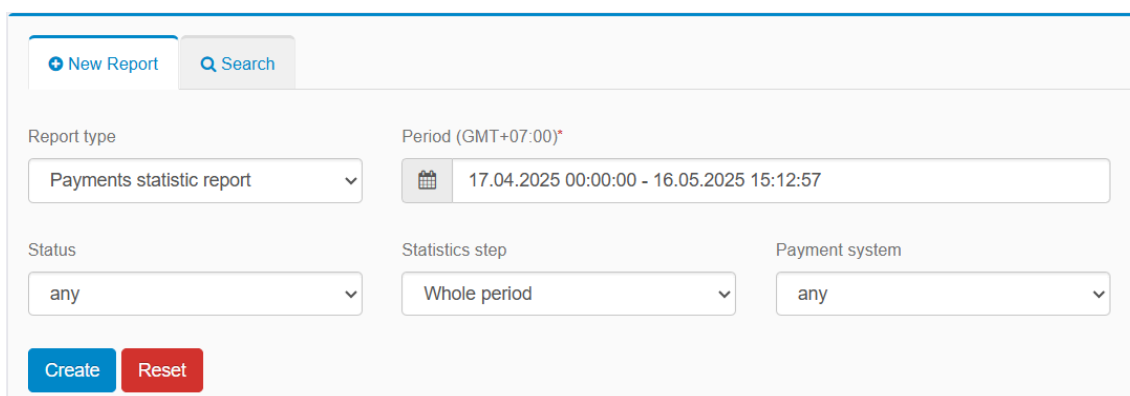

using the general filters Report type and Period.

The screenshot shows the 'Reports' section header. Below it, there's a 'New Report' button and a search bar. A 'Report type' dropdown menu is open, displaying the following options: Payments statistic report, Payments list report, Transfers statistic report, Transfers list report, and Payouts statistic report.

There are also additional filters for each report.

When generating a Payment statistic report, you can set the filters Status (transaction status in our system), Statistics step (type of data grouping over time) and Payment system (payment method).

The screenshot shows the 'New Report' tab with the 'Payments statistic report' selected. The 'Period (GMT+07:00)*' is set to '17.04.2025 00:00:00 - 16.05.2025 15:12:57'. Below this, there are three filters: 'Status' set to 'any', 'Statistics step' set to 'Whole period', and 'Payment system' set to 'any'. At the bottom, there are 'Create' and 'Reset' buttons.

For the Payment list report there are additional filters Status (transaction status in our system) and Payment system (payment method).

This screenshot shows the filter form for the 'Payments list report'. At the top, there are buttons for '+ New Report' and 'Search'. The form includes a 'Report type' dropdown set to 'Payments list report', a 'Period (GMT+07:00)*' date range from 17.04.2025 00:00:00 to 16.05.2025 15:12:57, a 'Status' dropdown set to 'any', and a 'Payment system' dropdown set to 'any'. At the bottom are 'Create' and 'Reset' buttons.

For the Transfer statistical report, the Status and Statistics step filters are available:

This screenshot shows the filter form for the 'Transfers statistic report'. It features the same top navigation and date range as the previous form. The 'Report type' is set to 'Transfers statistic report'. The 'Status' dropdown is set to 'any', and the 'Statistics step' dropdown is set to 'Whole period'. 'Create' and 'Reset' buttons are at the bottom.

When generating a Transfer list report, transfers for a given Period can be sorted using the Date filter either by the date the transfer was created in the system (Created) or by the date of successful transfer processing (Paid). There are also Status and Recipient ID filters.

This screenshot shows the filter form for the 'Transfers list report'. The 'Report type' is 'Transfers list report', the 'Period' is the same date range, and the 'Status' is 'any'. The 'Date' dropdown menu is open, showing options 'Created' (highlighted in blue) and 'Paid'. There is also a 'Recipient ID' text input field. 'Create' and 'Reset' buttons are at the bottom.

For the Payout statistical report, the Status and Statistics step filters are available:

[+ New Report](#) [Search](#)

Report type: Payouts statistic report

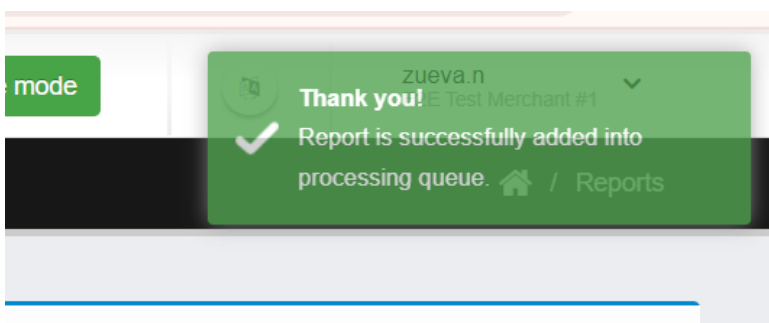

Period (GMT+07:00)*: 17.04.2025 00:00:00 - 16.05.2025 15:12:57

The downloaded Payments statistic report contains the following information:

- Date - date/period for which the amount and number of payments are displayed
- Number of payments - number of payments for a given time period
- Overall amount - total amount for a given time period
- Minimal payment - minimum payment for a given time period
- Maximal payment - maximum payment for a given time period
- Payee amount - amount of payments for a given time period
- Fee amount - service commission amount
- Fee VAT - VAT, calculated from the Fee commission
- Currency - currency

The downloaded Payments list report contains the following information:

- PaymentID - payment identifier in the system
- Order - payment identifier on the merchant side
- Amount - payment amount
- Fee - service commission amount from the payment
- Fee VAT - VAT, calculated from the Fee commission amount
- Net - payment amount, excluding the commission amount and VAT
- Currency - payment currency
- Mutual Amount - payment amount in the merchant's settlement currency
- Mutual Fee - service commission amount from the payment in the merchant's settlement currency
- Mutual Fee VAT - VAT, calculated from the Fee commission, in the merchant's settlement currency
- Mutual Net - payment amount, excluding the commission and VAT in the merchant's settlement currency
- Mutual Currency - merchant's settlement currency
- Payment System - payment system.
- Created - time when the payment was created
- Status Date - time when the status was updated
- Status - payment status in the system

The downloaded Transfers statistic report contains the following information:

- Date - time period for which the amount and number of transfers are displayed
- Number of transfers - number of transfers for a given time period
- Overall amount - total amount for a given time period
- Minimal transfer - minimum transfer for a given time period
- Maximal transfer - maximum transfer for a given time period
- Fee amount - service commission amount
- Fee VAT - VAT, calculated from the commission

- Currency - currency

The downloaded Transfers list report contains the following information:

- Transfer ID - transfer identifier in the system
- Order ID - transfer identifier on the merchant side
- Recipient ID - recipient identifier in the system
- Bank Name - recipient bank name
- Status - transfer status in the system
- Client amount - transfer amount in the merchant settlement currency, excluding commission and VAT
- Client currency - merchant settlement currency
- Amount - transfer amount, excluding commission and VAT
- Fee - service commission amount for the transfer
- Fee vat - VAT, calculated from the Fee commission amount
- Total fee - total Fee commission and VAT Fee vat
- Gross - transfer amount including commission and VAT
- Currency - transfer currency
- Created at - time when the transfer was created in the system
- Authorized at - time when the transfer was authorized
- Sent at - time when the transfer was sent to the payment queue
- Paid at - time when the transfer was paid for
- Deleted at - time when the transfer was deleted from the system
- Failure code - processing error code
- Failure message - processing error description
- Description - comment on the transfer (e.g. transfer purpose)

The downloaded Payouts statistic report contains the following information:

- Date - the time period for which the total amount and number of completed payouts are displayed.
- Number of payouts - the number of completed payouts for a given time period
- Overall amount - the total amount of completed payouts for a given time period
- Minimal payout - the minimum payout for a given time period
- Maximal payout - the largest payout for a given time period
- Fee amount - the service commission amount
- Fee VAT - VAT, calculated from the Fee commission
- Currency - currency

11 Finance Section

Section for viewing the volumes and number of payments, transfers and payouts made.

When generating a report for the Payments section, you can set the Payment system (payment method), Status (transaction status in our system), Statistics step (data grouping type in time) filters. For the Transfers and Payouts sections, you can set the Status (transaction status in our system), Statistics step (data grouping type in time) filters.

The screenshot shows the 'Finance' section of a partner's personal cabinet. At the top, there are three tabs: 'Payments', 'Transfers', and 'Payouts'. The 'Payments' tab is selected. Below the tabs is a 'Settings' panel with the following options:

- Period (GMT+07:00)*:** A date range selector.
- Payment system:** A dropdown menu with 'any' selected.
- Status:** A dropdown menu with 'any' selected.
- Statistics step:** Radio buttons for 'Whole period', 'Daily', and 'Monthly' (selected).
- Show** and **Reset** buttons.

Below the settings panel is a table titled 'Financial information from January 1, 2024 to April 17, 2024'.

Date (Asia/Bangkok)	Number of payments	Overall amount	Minimal payment	Maximal payment	Recipient amount	Fee amount	Fee VAT	Currency
Jan 2024	659,042		50.00	500,055.00				THB
Feb 2024	13		200.00	50,000.00				THB
Mar 2024	106		123.11	35,808.90				THB
Apr 2024	7		1,000.00	26,202.00				THB

There is no classification for single payments in Reports section. The data is summarized. For details on a single payment, see the Payments section.

Date - filtering time period (in this case, statistics by month).

Number of payments - number of payments for a given time period.

Overall amount - average for all transactions per month.

Minimal payment - minimum payment for a given time period.

Maximal payment - largest payment for a given time period.

Recipient amount - payment amount.

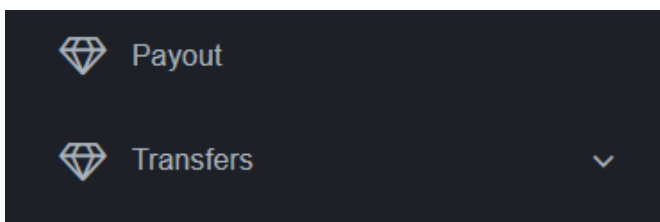

Fee amount - payment system commission amount.

Fee VAT - the amount of VAT from our company's commission.

Currency - payment currency.

12 Withdrawals

There are 2 type of withdrawals in the system:

1. **Payouts** are manually processed requests for withdrawal of funds, this type of withdrawal is optional and may not be connected to the partner by default.
2. **Transfers** are automatically processed requests for withdrawal of funds, this is the main way for a partner to withdraw funds from the system to an individual's bank account.

Comparison of **payouts and transfers**:

Payout	Transfer
Payout is a manually processed withdrawal of money from the system at the request of a partner from his available balance to: • a legal entity registered in the country of operation; • a legal entity registered outside the country of operation, through an agent*, * An agent is a middleman, a legal entity or an individual who has accounts in banks and can take responsibility for receiving our partner's funds from our company and transferring these funds from his account in a bank to the partner's accounts in banks of other states. A separate agreement is concluded between the middleman agent and the partner, the content and responsibility of the parties under which lie outside the scope of obligation arising from the Agreement between our company and the partner.	Transfer is a money withdrawal through a bank to the account of an individual. Transfer is carried out automatically after creating a recipient, setting the transfer amount and signing it through 2FA. A generated and signed request is sent to a bank, which transfers money from our account to the recipient's account in a bank. It's an automatic process and works 24/7.
no-limit money withdrawal to the partner's personal accounts	
this is a non-automatic payment	is automatically processed in the system and sent to the bank after 2FA binding
Payout is carried out through one or several channels to the bank accounts specified by the partner	

 For security purposes, the system has a daily limit by default. If a partner needs to increase the daily transfer limit, then he should send a request to the Support service.

13 Payout Section (Optional)

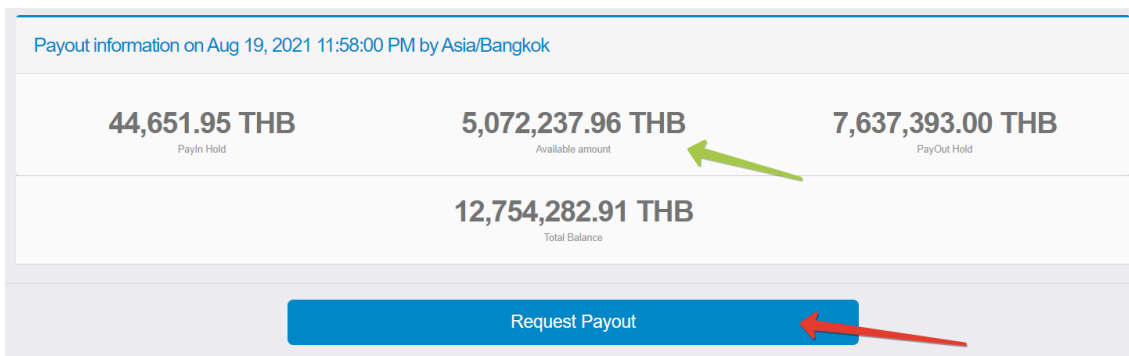

In this section, a partner can manage withdrawals from the system, carried out in manual mode. **This method of withdrawal of funds is optional and may not be connected to the partner by default.**

At the top of the section, the details of the partner's balance are displayed.

PayIn Hold balance is the amount of funds in the system that are on hold and cannot be withdrawn from the system before the expiration of the **hold period**.

When the hold period expires, the funds will be transferred to the Available amount balance. After that it will be possible to order their withdrawal.

How to make a withdrawal via Payout:

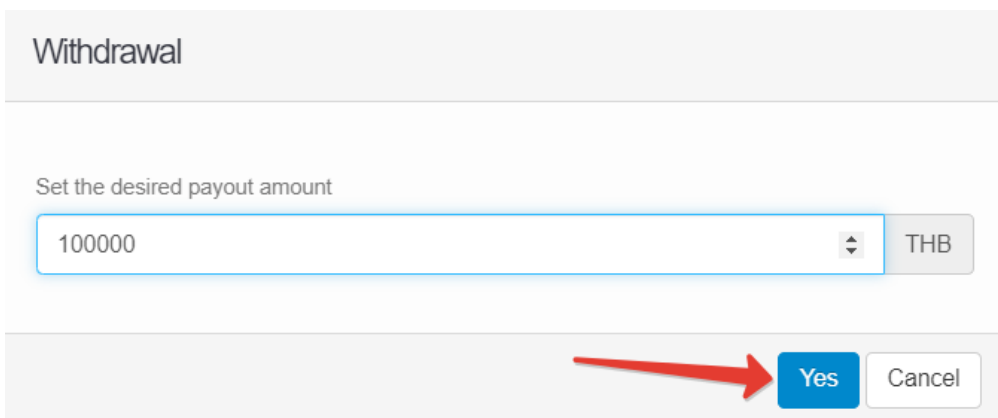

Payout information on Aug 19, 2021 11:58:00 PM by Asia/Bangkok

44,651.95 THB PayIn Hold	5,072,237.96 THB Available amount	7,637,393.00 THB PayOut Hold
12,754,282.91 THB Total Balance		

Request Payout

Note: A green arrow points to the 'Available amount' and a red arrow points to the 'Request Payout' button.

To order a payout, click the **Request Payout** button and specify any amount you want to withdraw within the **Available amount**.

Withdrawal

Set the desired payout amount

100000 THB

Yes Cancel

Note: A red arrow points to the 'Yes' button.

Then click **Yes**. The created payout will appear on the first line in the **Payout history** list with the **Waiting** status. The payout amount specified for withdrawal will be transferred from the Available amount balance to **Payout Hold**.

Payout information on Aug 20, 2021 9:40:38 AM by Asia/Bangkok

44,651.95 THB PayIn Hold	4,972,237.96 THB Available amount	7,737,393.00 THB PayOut Hold
12,754,282.91 THB Total Balance		

[Request Payout](#)

Payouts history 20 per page ▾

Amount	Order date	Pay date	Status	
100,000.00 THB	2021-08-20 09:40:46		waiting	
100.00 THB	2021-07-21 14:24:57		waiting	
100.00 THB	2021-06-23 14:32:46		waiting	
5,000,000.00 THB	2021-05-31 17:24:06		waiting	

Now you need to wait until the created payout is processed **manually by our company**. It usually takes 1 to 3 business days.

After the processing is completed and the withdrawal of funds from the system to the details specified by the partner, the payout status will change to **Paid**.

When a payout is rejected on our side, it moves from the Waiting status to the Cancellation status.

- Payout ID - a unique identifier of the payout in the system.
- Order date - date and time of payout creation in the system.
- Pay date - date and time of successful payout processing.
- Amount - payout amount.
- Fee - payout commission amount.
- Fee VAT - VAT amount from payout commission.
- Total amount - the sum of the payout amount and the commission for it.
- Status - current payout status.

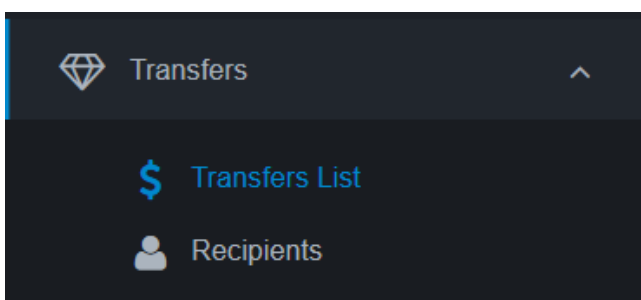

14 Transfers Section

Transfers are the main way for a partner to withdraw funds from the system to an individual's bank account.

The Transfers section contains transfers only to bank accounts of individuals in countries where the payment system is present. Transfers are processed by banks automatically 24/7.

The maximum daily total transfer amount is set individually for each partner, also, by default, there is a daily limit on withdrawals via transfers. To increase this daily limit please send a request to Support service.

The Transfers section consists of two subsections: **Transfers List** and **Recipients**.

Before making a **first** transfer, the partner must add the bank details of the **money recipient**. To do this, partner needs to click on **Recipients** subsection and **follow steps below**:

Step 1. Go to the Recipients subsection on the left panel and click the **Create recipient** button.

ID	Account Number	Bank	Name	Description	Created at	Status	Actions

⚠ Attention! If the transfer was created for a recipient with the "Personal" type, whose bank account is registered to the company, then when the seller tries to authorize such a transfer, it will be transferred to the "Rejected" status. If it is necessary to withdraw funds from the system to the company's bank account via a transfer, the merchant must have an agreement between this company and the payment system, which must specify the company's bank account. After concluding the agreement, the merchant can create a recipient with the type: "Company" and contact the support service to activate this recipient.

After saving, return to the Transfer List:

Step 3. To create a new transfer click the button **Create Transfer**.

In accordance with the requirements of the government regulator, all personal data is now encrypted.

The search for the desired recipient can be carried out using the ID, Bank, Name or Description filters by exact match by entering the corresponding names in the Input text field in the table header.

Click **Save** button.

When the transfer is created, it appears in the general list in the status "new". During this period the transfer can be edited or deleted. The possibility of making changes is blocked after moving in the status "to processing".

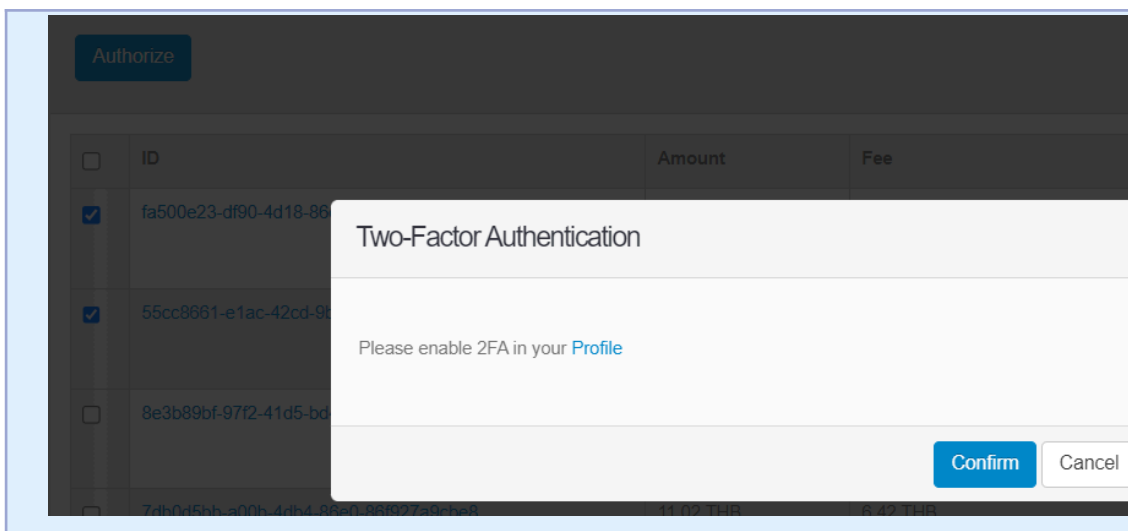

The funds for the created transfers have already been debited from the Available amount and transferred to the PayOut Hold balance.

Step 5. Transfer should be authorized (in other words, "signed") to be processed.

NB!

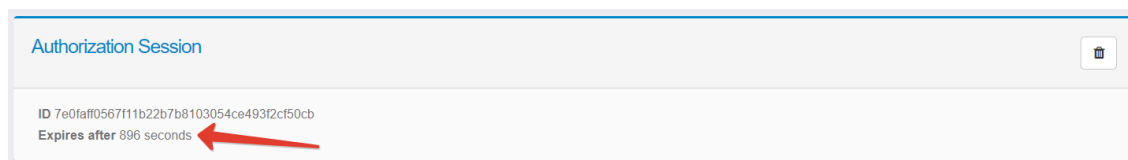

To authorize transfers, the **partner must enable two-factor authentication** for security purposes.

Press the **Transfers Authorization** button,

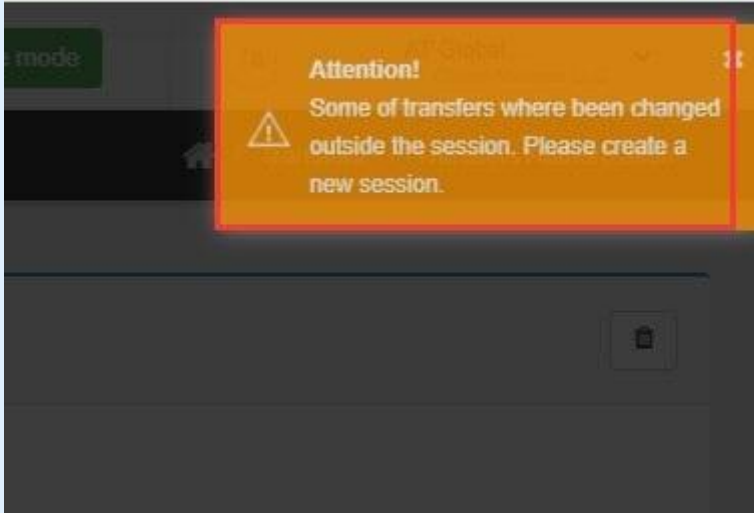

after which the time limited authorization session is created.

NB!

You'll need to create and authorize transfer **within one authorization session**, otherwise a warning message about session's overdue will appear in the Cabinet after your session's inactivity for more than 15 minutes.

If another user changed the transfer in another authorization session (input some edits, deleted, authorized or rejected the transfer), then it is not possible to continue working with the transfer in the current authorization session and the following warning message will appear in PC:

Attention!
Some of transfers where been changed outside the session. Please create a new session.

In both cases, you must first re-create the authorization session via [Transfer Authorization] and continue authorizing the necessary transfers.

Step 6. Select transfers from the list for confirmation. Click the **Authorize** button to launch 2FA.

Transfers Authorization Home / Transfers / Transfers Authorization

Save Create Transfer

Clicking on the button  in the far right column in the table with recipients will open the transfer creation page. To delete a recipient, click on the trash can icon.

15 Accounting documents

In this section you can view direct deposits/debits of funds from the merchant account balance in the system.

At the top of the section there is an area for filtering Search accounting documents operations. To get information on a specific operation, you need to enter the Document ID, and the list of operations can also be filtered by setting the appropriate search criteria: transaction amount, time period, transaction type.

There are only two types of transactions: CREDIT - deposit and DEBIT - withdrawal.

Below is an area with a list of operations, by default the 20 most recent payments are displayed, when you scroll down the list, previous operations are loaded.

16 Create Payment Link

In this section, you can create a payment link and people will be able to make payments using this link.

To give your employees or partners the ability to work only with payment links, you can create accounts with rights only to the Payment Links section.

To do this, you need to create a corresponding user group (User groups section) with rights only to the Payment Link section, then create a user and assign this group to him. If a user is assigned a user group with rights only to the Payment Link section, such a user will not see anything else in the account.

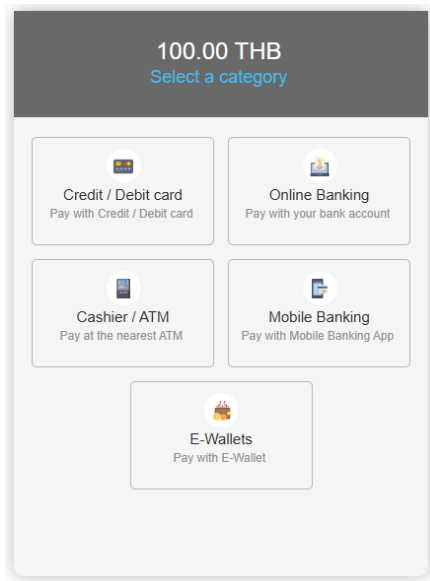

To create a link, fill in the required data on the Create Payment Link page: amount, interface language, and environment: Sandbox (working with a test version of the payment system) or Live (working with a production version).

If the merchant has access to both environments, then Live is selected by default. If the merchant has access to only one environment, then the corresponding environment will be selected, without the ability to change it.

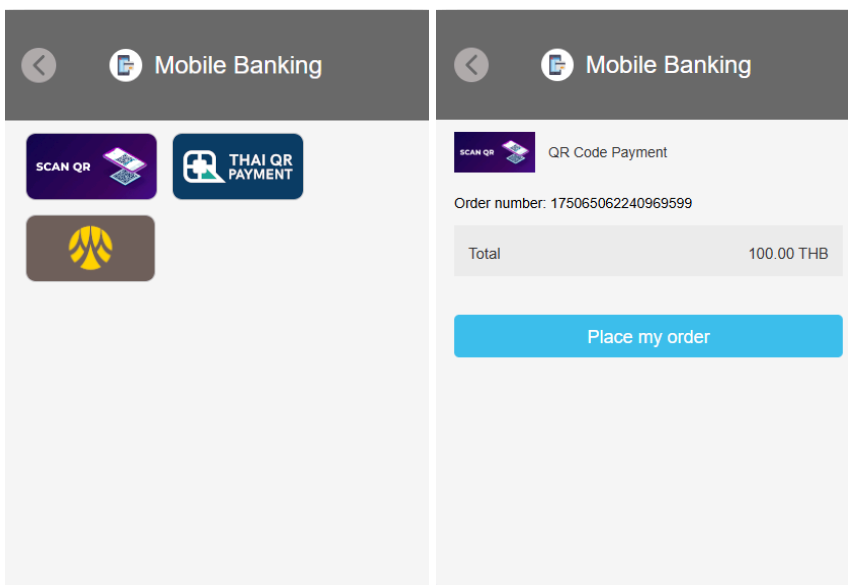

You can also fill in optional fields if necessary: Redirection URLs (links to pages on the merchant side to which the client is redirected depending on the payment status) and Order ID (payment identifier on the merchant side).

After entering the data, copy the generated link by clicking the Copy Link button on the right side.

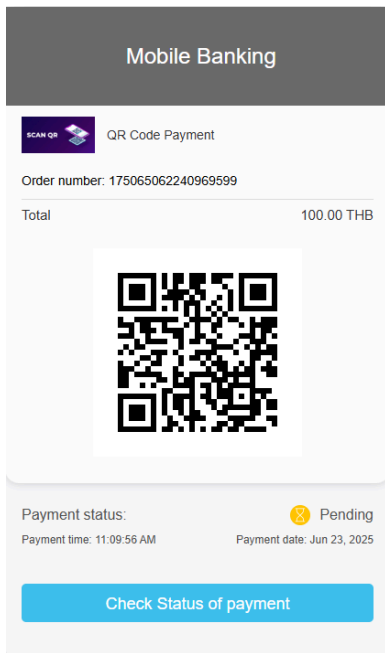

When you click the link, the payment interface will open.

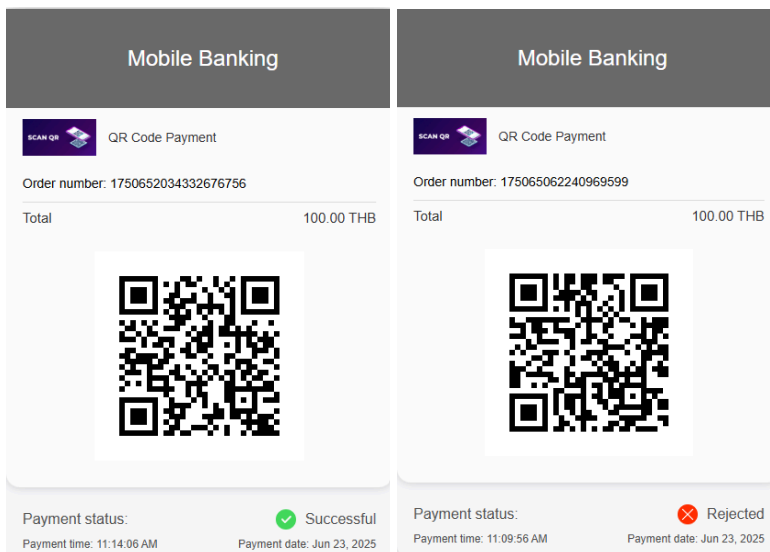

The user selects a payment method, goes to the payment information screen and confirms the payment.

On the page that opens, the user makes a payment and can check the payment status.

In case of successful payment, the payment status is displayed as Successful. In case of payment rejection or expiration of its lifetime (TTL, time-to-live), the status is displayed as Rejected.

Payments made through the link are displayed in the Payments section, the payment links themselves are not displayed anywhere in the system.

A merchant can create an unlimited number of payment links, created links are permanent and reusable, the client can follow the same link many times and make payment.

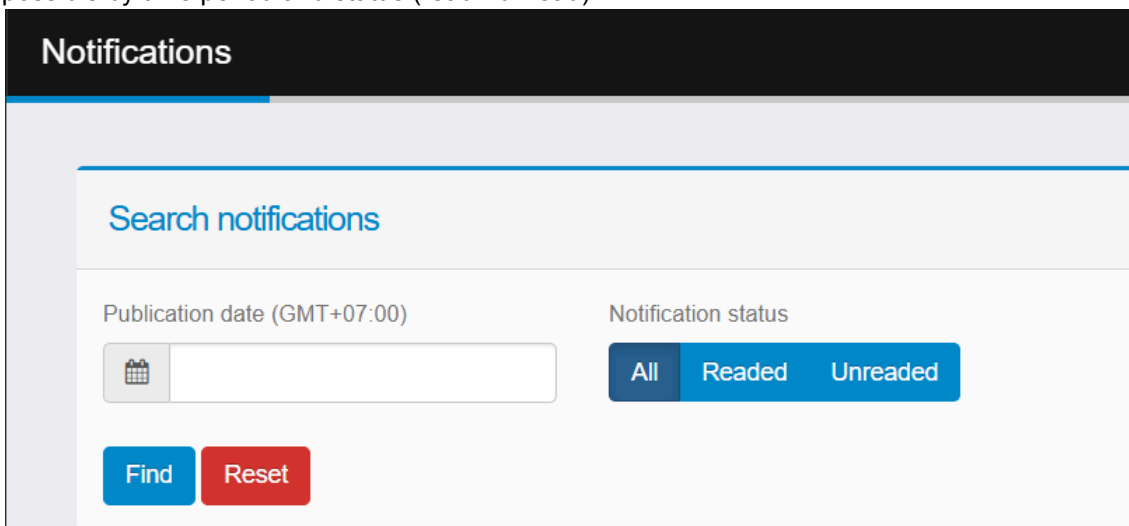

It is impossible to create a one-time payment link in the system, all created links are reusable.

17 Notifications

This section displays notifications about various changes in the system, such as system updates and related changes, scheduled and emergency notifications about possible problems in the payment system or individual services within it, notifications about national holidays, etc.

Next to the Notifications item in the menu, a marker of unread messages and their number is displayed. If there are no unread messages, the marker is not displayed.

At the top of the section, there is an area for filtering notifications, Search notifications. Search is possible by time period and status (read - unread).

The screenshot shows the 'Notifications' section of a user interface. At the top, there is a dark header with the word 'Notifications' in white. Below this is a light gray area containing a search bar labeled 'Search notifications'. Under the search bar, there are two filters: 'Publication date (GMT+07:00)' with a calendar icon and a text input field, and 'Notification status' with three buttons: 'All' (dark blue), 'Readed' (blue), and 'Unreaded' (blue). At the bottom of the filter area, there are two buttons: 'Find' (blue) and 'Reset' (red).

Below is an area with a list of notifications, messages are sorted from new to old. When you click on the sort in the table header, the data is loaded in accordance with the sort.

Unread notifications are highlighted in bold and there is a NEW sign next to them.

When you click on Subject (clickable), the Notification details page opens. On it, you can see the full title and content of the notification. When you open the details, the notification is marked as read, the unread counter decreases (if a previously unread message is opened).
